

TO WHOM IT MAY CONCERN

Guerin Systems worked with SINTEC in 2007, when SINTEC provided the electrical and mechanical construction services for the Guerin Systems installation - Modification of existing salt mill stations at the Zhukovsky food production plant in Russia.

In 2010 SINTEC was awarded the contract from the worldwide famous food producer for full scope of mechanical installation of Guerin Systems equipment – The Big Bag dumping with batch preparation and pneumatic conveying to existing installation at the Zhukovsky food production plant in Russia.

For both of these projects, SINTEC provided the high quality mechanical and electrical installation services in accordance with all the professional requirements of construction in food production industry. All the works have been carried out according to the schedule and the projects were completed to the customer's satisfaction.

Apart from this SINTEC has shown flexibility in working under different technical regulations and norms, such as ISO 9001:2001, ATEX, GOST and also hygiene regulations in food production industry.

I recommend SINTEC as a professional and reliable mechanical and electrical contractor in construction in the food production industry.
