REFERENCE LETTER

In 2003 – 2004 a Russian company Sintec performed electrical installation works at our factory being a subcontractor of the company PLC Snef.

In the primary production workshops of Michelin factory ООО Sintec has performed the following works:

- Installation of a 0.4 kV power distribution network,
- Connection of the processing equipment,
- Installation of the workflow automation system,
- Installation and setting-up of the fire alarm system,
- Installation of the 5E structured cable data exchange network,
- Installation of the working and emergency lighting,
- Installation of the fiber-optic network.

0.4 kV power distribution network, fire alarm system and lighting network were also installed at the finished products storage facilities.

All the performed electrical installation works were accompanied by the preparation of the as-build documentation and very professionally issued technical test reports.

All the works were performed in accordance with the contractual completion dates. The quality of the performed works is very high and conforms to Russian and European standards.

I can generally characterize the company Sintec as a highly reliable and a very responsible Partner, who performs his obligations exclusively with high quality and in due time.

I can recommend the company Sintec to any Customer as a reliable Contractor for the execution of similar electrical installation works.
